Stevedoring Services

A modern logistic port system combined with an efficient computerized system make the stevedoring department highly competitive and establish its reliability internationally.

"C.S.A.V.", "C.C.N.I.", "C.T.E." are but a few shipping companies which have been using the De Cesare company for the stevedoring services of their ships for many years.

The efficiency of the people in charge, backed by a highly specialized team (clerks, crane and forklift operators) make it possible to handle loading and unloading swiftly and with excellent results on each working shift. They are specialized in containers, minerals, pulpwood, cars and metallurgical products (copper, lead, aluminium, coils, structural steel, tinplates).

The De Cesare company also carries out, in its own terminal inside the port, all the additional operations related to containers, such as loading, unloading, handling and storage for the whole period necessary before forwarding by sea, land or rail.
